Y. F. Zheng, Shanghai, China

Aims, Scope, and Editorial Information

Mathematics of Control, Signals, and Systems will publish mathematically rigorous, original research papers concerned with system theoretic aspects of control and signal processing. Expository papers and papers dealing with novel applications of significant mathematical results will also appear. The scope of *MCSS* includes algebraic, analytic, and geometric aspects of linear and nonlinear control systems, stochastic control, stability, identification and estimation, robust and adaptive systems, spectral analysis, signal modeling, signal processing algorithms and architectures, discrete-event systems, numerical and computational techniques, large-scale and distributed systems, decentralized and hierarchical control, dynamic optimization and optimal control.

Papers submitted to *MCSS* will be assigned to an Associate Editor, who will be responsible for making a publication recommendation. The goal is for a fast review process, consistent with a detailed and careful evaluation by at least two referees. Papers will be judged based on originality, substance, and quality of exposition. As an aid to further processing of accepted papers, submission of an electronic version of the manuscript for the journal's files is encouraged.

The exclusive copyright for all languages and countries, including the right for photomechanical and any other reproductions, also in microform, is transferred to the publisher.

The use of registered names, trademarks, etc. in this publication does not imply, even in the absence of a specific statement, that such names are exempt from the relevant protective laws and regulations and therefore free for general use.
